Introduction

As a wholly-owned large subsidiary of Banco Santander, S.A., under the retained EU law version of Capital Requirements Regulation (UK CRR) Santander UK Group Holdings plc (the Company) is required to produce and publish annually a specified number of Pillar 3 disclosures. In accordance with the European Banking Authority (EBA) guidelines on disclosure frequency [1], the Company has assessed the need to publish capital-related disclosures more frequently than annually and the disclosures deemed appropriate for more frequent publication have been included in the additional capital disclosures set out in this document. All disclosures within Part 1 of this document on pages 4 to 13 cover the consolidated Santander UK Group Holdings plc group position.

The Company is the immediate parent company of Santander UK plc, a Ring Fenced Bank (RFB), and associated controlled entities and is the head of the Santander UK group for regulatory capital and leverage purposes. Part 2 of this document on pages 14-21 includes a specified number of Pillar 3 disclosures in accordance with the EBA guidelines on disclosure frequency for the Santander UK plc group, which are similar to those for the Company.

^[1] EBA guidelines on materiality, proprietary and confidentiality and on disclosure frequency are under Articles 432(1), 432(20) and 433 of Regulation (EU) No 575/2013.

The Company is applying the IFRS 9 capital transitional arrangements set out in the onshored versions of EU Regulation 2017/2395 and EU Regulation 2020/873 that amend the Capital Requirements Regulation. Under the transitional arrangements, the Company is entitled to mitigate the effect to capital of Expected Credit Loss-based provisioning following the implementation of IFRS 9. The transitional arrangements will end on 31st December 2024 with the amount of capital relief available having reduced each year by a transitional factor. The transitional factor for 2024 is 25 percent which applies to post 1 January 2020 provision movements

The capital relief affects both the capital base and RWAs reported by the Company. The adjustment to CET1 capital is now comprised of a dynamic element only, having previously been comprised of a static element and a dynamic element. The dynamic element is based on the capital impact of the change in provision levels post 1 January 2020. In addition to this adjustment, the transitional arrangements also reduce associated capital position impacts for exposures modelled under the Standardised Approach for Credit Risk and Tier 2 capital from an excess of provisions over expected losses for exposures modelled using the Internal Ratings-Based approach.

Leverage Ratio

The following table summarises the Company's end point Tier 1 UK Leverage ratio as at 31 March 2024 together with the previously disclosed quarter end information at 31 December 2023, 30 September 2023, 30 June 2023 and 31 March 2023. The UK Leverage Ratio is consistent with the Leverage Ratio applied to large UK banks under the framework defined by the Financial Policy Committee's review of the Leverage Ratio.

Qualitative information on LCR (LIQB)

Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time

The LCR requirement (weighted) is broadly consistent over time, driven mainly by deposits. Corporate deposits contribute a greater requirement despite Retail deposits being significantly larger in number, as a result of the standardised LCR weightings. The 12 month average HQLA increased slightly in Q1 as a result of an increase in customer deposits combined with lower mortgage lending. The LCR maintains a significant surplus to both internal and regulatory requirements.

Explanations on the changes in the LCR over time

The 12 month average LCR of 160% reflects our continued strong liquidity position

Explanations on the actual concentration of funding sources

Santander UK is largely funded through customer deposits (£193bn), with the significant proportion being Retail, we leverage our large and diverse customer base to offer products that give us a long-term sustainable source of funding and c86% of our core retail liabilities are covered by the FSCS guarantee. We also have c£55bn of wholesale funding which includes secured, unsecured term funding as well as c£15bn of TFSME Funding.

High-level description of the composition of the institution's liquidity buffer.

The liquidity buffer is largely compromised (c96%) of Level 1 assets, primarily cash held in our Bank of England Reserve Account.

Derivative exposures and potential collateral calls

The main drivers of derivative exposures / potential collateral calls are the Historic Look Back Approach (HLBA) to calculating collateral requirements in the LCR and collateral outflows due to counterparties in the event of a three-notch downgrade.

Currency mismatch in the LCR

We have no material mismatch in our currency LCRs, with most of the funding raised in currency swapped back to GBP and the remainder being used to fund structural currency assets.

Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile n/a

March 2024 Additional Capital and Risk Management Disclosures for Santander UK plc

Introduction

As a wholly-owned large subsidiary under UK CRR, Santander UK plc (the RFB) is required to produce and publish annually a specified number of Pillar 3 disclosures rather than a complete set of Pillar 3 disclosures. In accordance with the EBA guidelines on disclosure frequency¹, the RFB has assessed the need to publish capital-related disclosures more frequently than annually, and the disclosures deemed appropriate for more frequent publication have been included in the additional capital disclosures set out in this document. All disclosures cover the consolidated RFB Group position.

¹ EBA guidelines on materiality, proprietary and confidentiality and on disclosure frequency are under Articles 432(1), 432(20) and 433 of Regulation (EU) No 575/2013.

The RFB group is applying the IFRS 9 capital transitional arrangements set out in the onshored versions of EU 2017/2395 and EU Regulation 2020/873 that amend the Capital Requirements Regulation. Under the transitional arrangements, the Company is entitled to mitigate the effect to capital of Expected Credit Loss-based provisioning following the implementation of IFRS 9. The transitional arrangements will end on 31st December 2024 with the amount of capital relief available having reduced each year by a transitional factor. The transitional factor for 2024 is 25 percent which applies to post 1 January 2020 provision movements.

The capital relief affects both the capital base and RWAs reported by RFB group. The adjustment to CET1 capital is now comprised of a dynamic element only, having previously been comprised of a static element and a dynamic element. The dynamic element is based on the capital impact of the change in provision levels post 1 January 2020. In addition to this adjustment, the transitional arrangements also reduce associated capital position impacts for exposures modelled under the Standardised Approach for Credit Risk and Tier 2 capital from an excess of provisions over expected losses for exposures modelled using the Internal Ratings-Based approach.

Leverage Ratio

The following table summarises the RFB group's end point Tier 1 UK Leverage ratio at 31 March 2024 together with the previously disclosed quarter end information at 31 December 2023, 30 September 2023, 30 June 2023 and 31 March 2023. This is consistent with the Leverage ratio applied to large UK banks under the framework defined by the Financial Policy Committee's review of the Leverage ratio:

Qualitative information on LCR (LIQB)

Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time

The LCR requirement (weighted) is broadly consistent over time, driven mainly by deposits. Corporate deposits contribute a greater requirement despite Retail deposits being significantly larger in number, as a result of the standardised LCR weightings. The 12 month average HQLA increased slightly in Q1 as a result of an increase in customer deposits combined with lower mortgage lending. The LCR maintains a significant surplus to both internal and regulatory requirements.

Explanations on the changes in the LCR over time

The 12 month average LCR of 156% reflects our continued strong liquidity position

Explanations on the actual concentration of funding sources

Santander UK is largely funded through customer deposits (£187bn), with the significant proportion being Retail, we leverage our large and diverse customer base to offer products that give us a long-term sustainable source of funding and c86% of our core retail liabilities are covered by the FSCS guarantee. We also have c£55bn of wholesale funding which includes secured, unsecured term funding as well as c£15bn of TFSME Funding.

High-level description of the composition of the institution's liquidity buffer.

The liquidity buffer is largely compromised (c96%) of Level 1 assets, primarily cash held in our Bank of England Reserve Account.

Derivative exposures and potential collateral calls

The main drivers of derivative exposures / potential collateral calls are the Historic Look Back Approach (HLBA) to calculating collateral requirements in the LCR and collateral outflows due to counterparties in the event of a three-notch downgrade.

Currency mismatch in the LCR

We have no material mismatch in our currency LCRs, with most of the funding raised in currency swapped back to GBP and the remainder being used to fund structural currency assets.

Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile n/a
